⇒ indicators - Litmus, phenolphthalein & methy orange

Method of titration.

- 1) Acid-base titration
- 2) complexometric titration
- 3) precipitation titration
- 4) Redox titration

1) Acid-Base titration

→ Acid-base titration are when an acidic or basic titrant reacts with a base or acid analyte. It is an analytical method for determining the concentration of an acid or base by accurately neutralizing them with a known concentration standard solution of either acid or base

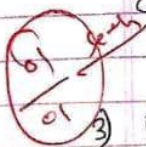

indicator used are - phenolphthalein & methyl-orange

2) Complexometric titration.

→ The development of a complex between the analyte and the titrant is the basis for complexometric titration

- A metal-ligand complexation reaction is used in complexometric titration
- EDTA is one of the most commonly used chelating agent in analytical chemistry for complexometric titration
